2 Safety Instructions

The battery contains flammable materials such as organic solvents. Mishandling the battery may cause fire, smoke, or an explosion and the battery's functionality will be seriously damaged. Protection circuitry must be designed into the application device to protect the battery. Additionally, SANYO highly recommends adding these instructions to the owner's manual. Please read and check the following prohibited actions.

Danger

(1) Immersion

Do not immerse the battery in liquid such as water, beverages, or other fluids.

Exposure to liquid may damage the battery or the battery pack (including protection circuit). As a result, the battery may generate heat, smoke, catch fire, or explode.

(2) High Temperature

Do not use or place the battery near an open flame, heater or high temperature (above 80°C).

Subjecting the battery to high temperature may damage the polyolefin separator and can cause an internal short circuit. This may cause the battery to generate heat, smoke, catch fire, or explode.

(3) Chargers and Charge Conditions

Do not use unauthorized chargers.

Only charge the battery within specified conditions (e.g., temperature range, voltage, and current). Use of an unauthorized charger could cause the battery to generate heat, smoke, catch fire, or explode.

(4) Reverse Polarity

Do not attach or insert battery with polarity reversed.

A battery has polarity. If the battery does not easily fit into the charger or device, check the battery's orientation. Do not force the battery into the battery compartment. If attached to the device with reversed polarity, the battery may generate heat, smoke, catch fire, or explode.

(5) Direct Connection

Do not connect the battery to an AC outlet or DC automotive plug.

The battery requires a specific charger. If the battery is connected directly to a power outlet, the battery may generate heat, smoke, catch fire, or explode.

(6) Use in Other Equipment

Do not use the battery in equipment for which it was not intended.

If the battery is used in unapproved applications or systems, the battery may become damaged and generate heat, smoke, catch fire, or explode.

-------	--	------	------

Warning

(1) Ingestion

Keep away from small children.

Keep the battery away from small children. If the battery or any of its component parts is swallowed, seek medical attention immediately.

(2) Storage

Do not place the battery in or near a microwave or other cooking appliances.

If subjected to heat or electromagnetic radiation, the battery may leak, generate heat, smoke, catch fire, or explode.

(3) Mixed Use

Do not mix with other batteries.

The battery should not be used with other batteries having a different capacity, chemistry, or manufacturer. Doing so could cause the battery to generate heat, smoke, catch fire, or explode.

(4) Rust, Discoloration and Deformities

Do not use abnormal batteries.

Immediately stop using the battery if there are noticeable abnormalities, such as smell, heat, discoloration, or deformity. The battery may be defective and could generate heat, smoke, catch fire, or explode with continued use.

(5) Charging Time

Stop charging if the charging process cannot be finished.

If the battery can not finish the charging process within the specified time, halt the charging process. The battery may generate heat, smoke, catch fire, or explode.

(6) Leakage ①

Do not use a leaking battery near open flame.

If the battery or liquid leaking from the battery has an irritating odor, the battery should be kept away from any open flame. If exposed to an open flame, the battery could ignite and explode.

(7) Leakage ②

Do not touch a leaking battery.

If liquid leaking from the battery gets into your eyes, immediately flush your eyes with clean water and seek medical attention. If left untreated, it will cause significant eye damage.

(8) Transport

Pack the battery securely for transport.

To prevent short-circuit or damage during transport, securely pack the battery in a case or carton.

File No	NCR18650-618	Rechargeable Battery Business Division, SANYO Electric Co., Ltd.
---------	--------------	---

Title	Lithium Ion Battery Specification (Cylindrical Type)	Page	5/13
-------	--	------	------

Caution

(1) Exposure to Direct Sunlight

Do not use or leave the battery in a location exposed to excessive heat, such as in direct sunlight or in a car. Doing so could cause the battery to generate heat, smoke, catch fire, or explode. It may also cause the battery's performance and life to deteriorate.

(2) Static Electricity

The battery pack has a protection circuit. Do not use the battery where static electricity in excess of 100V is generated as it may damage the protection circuit. If the protection circuit fails, the battery may generate heat, catch fire, smoke, or explode.

(3) Charging Temperature Range

Only charge the battery between 10°C and 45°C. Charging outside of this temperature range may cause the battery to leak, generate heat, or result in serious damage. It may also cause the battery's performance and life to deteriorate.

(4) Manual

Read the manual before use. Keep for future reference.

(5) Charging Method

Read the charger's manual before use for proper charging method.

(6) First Time Usage

Please contact the supplier if the battery gives off an unusual odor, generates heat, or shows signs of rust prior to its initial use.

(7) Use by Children

Parents must explain how to use the system and the battery. Please check back periodically to ensure children are using the system and the battery correctly.

(8) Flammable Materials

Do not charge or discharge near flammable materials. Doing so could result in fire.

(9) Leakage

If electrolyte leaks from the battery and comes into contact with skin or clothing, immediately flush with water. Otherwise, it may cause skin irritation.

(10) Handling of Exposed Contacts or Conductors

If the battery pack has a system interface consisting of stripped lead wires or exposed contact plates, handle with due care. Temporarily insulate exposed contacts and conductors with an insulator such as polypropylene tape or polyvinylchloride tape. Failure to do so could result in an electrical shock; a short circuit causing the battery to generate heat, smoke, catch fire, or explode; or the combustion of other materials.

(11) Recycling

When disposing of the battery, recycle it according to local rules and regulations.

File No	NCR18650-618	Rechargeable Battery Business Division, SANYO Electric Co., Ltd.
---------	--------------	---

Title	Lithium Ion Battery Specification (Cylindrical Type)	Page	6/13
-------	--	------	------

3 Scope

This specification applies to the Lithium Ion Battery NCR18650G-H0ANA for Pedelec by BATTERIEN-MONTAGE-ZENTRUM GMBH.

This Specification shall not apply to special applications requiring a high degree of quality and reliability where the failure or malfunction of the products may directly jeopardize life or cause threat of personal injury. A non-exhaustive list of such applications includes: weapons, aircraft and aerospace equipment, aircraft electronics equipment, medical equipment (excluding Class 1 equipment), intrinsically safe equipment, electric vehicles, hybrid electric vehicles, and electric motorcycles (excluding electric bicycles).

4 Battery Classification and Product Code

4.1	Battery Classification	Lithium Ion Battery
4.2	Product Code	BJ-A300230AA
4.3	Model Name	NCR18650G-H0ANA
4.4	Cell Type	NCR18650GA

5 Nominal Specifications

Item		Specifications	Notes
5.1	Rated Capacity	3300mAh	0.67A discharge at 20°C
5.2	Capacity (Minimum) * ¹	3350mAh	0.67A discharge at 25°C
5.3	Capacity (Typical)	3450mAh	Reference only
5.4	Nominal Voltage	3.6V	0.67A discharge
5.5	Discharging End Voltage	2.5V	
5.6	Charging Current (Std.)	1.675A	
5.7	Charging Voltage	4.20 ± 0.03V	
5.8	Charging Time (Std.)	4.0hours	
5.9	Continuous Discharge Current (Max.) * ^{2,3}	10A	0 ~ +40°C
5.10	Internal Resistance	less than 38mΩ	AC impedance 1 kHz
5.11	Weight	less than 49.5g	
5.12	Operating Temperature	Charge	10 ~ +45°C
		Discharge	-20 ~ +60°C
5.13	Storage Conditions	less than 1 month	-20 ~ +50°C
		less than 3 months	-20 ~ + 40°C
		less than 1 year	-20 ~ + 20°C
			Recoverable Capacity: 80%* ⁴

*1 Capacity is measured by the discharge at 0.67A until end voltage of 2.5V after fully charged at 25°C as described in the specification.

*2 Discharge at high rate or high temperature environment will accelerate the degradation of the battery capacity.

*3 The maximum discharge current for a single cell use. However after the battery pack assembly, maximum discharge current will be limited by a protection circuit or device.

*4
$$\text{Recoverable Capacity} = \frac{\text{Discharge Time after Storage}}{\text{Initial Discharge Time}} * 100$$

The discharge time is measured by fully charging the battery at 25°C and then discharging it at a current of 0.67A to 2.5V per cell in series.

*5 Maximum cell surface temperature :The cell temperature must not exceed 70°C.

File No	NCR18650-618	Rechargeable Battery Business Division, SANYO Electric Co., Ltd.
---------	--------------	---

Title	Lithium Ion Battery Specification (Cylindrical Type)		Page	7/13
6 Electrical Characteristics				
Item	Conditions		Criteria	
6.1 Full Charge	The battery is charged at a 1.675A constant current until the voltage reaches 4.20V. The current is then reduced to keep a constant voltage of 4.20V. The total charging time is 4.0 hours at 25°C.			
6.2 Capacity	(1) Within 1 hour after fully charging at 25°C as per item 6.1, the battery is discharged at 0.67A continuously to 2.5V at 25°C.		More than 300 min.	
	(2) Within 1 hour after fully charging at 25°C as per item 6.1, the battery is discharged at 3.35A continuously to 2.5V at 25°C.		More than 54 min.	
6.3 Cycle Life	After the battery has been subjected to 300 repeated charge and discharge cycles (charged by CC-CV of 1.675A-4.20V for 4.0 hours; discharged by CC of 3.35A to 2.5V at 25°C), the discharge time is measured as per Item 6.2, (2).		More than 38 min.	
6.4 Temperature Characteristics	(1) Within 1 hour after fully charging at 25°C as per item 6.1, the battery is stored at 0°C for 3 hours. The discharge time is then measured as per Item 6.2, (2) at 0°C.		More than 30 min.	
	(2) Within 1 hour after fully charging at 25°C as per item 6.1, the battery is stored at 60°C for 3 hours. The discharge time is then measured as per Item 6.2, (2) at 60°C.		More than 50 min.	
6.5 Storage at Fully Charged State	After fully charging at 25°C per item 6.1, the battery is stored for 20 days at 60°C. After storage, the battery is held at 25°C for 3 hours. Then, the discharge time is measured as per Item 6.2, (2).		More than 30 min.	
	Then, the same battery is fully charged again and discharged a second time and measured as per Item 6.2, (2) at 25°C.		More than 40 min.	
6.6 Storage at Full Discharged State	After fully charging at 25°C, the battery is discharged as per Item 6.2, (2). Then, the battery is stored for 20 days at 60°C. After storage, the battery is held at 25°C for 3 hours. Then, the discharge time is measured as per Item 6.2, (2) at 25°C.		More than 50 min.	
File No	NCR18650-618	Rechargeable Battery Business Division, SANYO Electric Co., Ltd.		

Title	Lithium Ion Battery Specification (Cylindrical Type)	Page	8/13
-------	--	------	------

Item	Conditions	Criteria
6.7 Drop	After fully charging at 25°C, the cell is dropped 3 times in random directions from a height of 1 m onto a flat surface of concrete.	No rupture, no fire

STANDARD TEST CONDITIONS:

All tests shall be conducted with new batteries delivered within the last 7 days. Tests shall be performed at a temperature of 25±2°C and a humidity of 65±20% (the standard temperature tolerance for Class 2 and the standard humidity tolerance for Class 20, respectively, as specified by *JIS Z 8703, Standard Atmospheric Conditions for Testing*). The precision of the voltmeter and ammeter used in the tests shall be higher than Class 0.5 as specified by *JIS C 1102-2, Special Requirements for Ammeters and Voltmeters*

7 Design and Dimensions

The battery design is shown in the following documents or drawings.

- Drawing number [NCR18650G-H0ANA01,AUR18650-SIYOUZ2-20]

8 Appearance

There shall be no such defects as followings, which may adversely affect commercial value of the cell:

- Scratch
- Rust
- Discoloration
- Dirt
- Deformation
- Leakage

9 State of Charge at Time of Shipment

The battery is shipped out with a state of charge that is approximately 48%*.

* The 48% capacity is the state of charge at the time that SANYO ships the battery. It is not the state of charge when BATTERIEN-MONTAGE-ZENTRUM GMBH receives the battery.

-------	--	------	------

10 Precautions for Designing of the Pedelects, the Chargers and the Battery packs.

10.1 Precautions for Designing of Pedelect and the Charger.

(1) Charge

- The battery is charged by a method of constant current-constant voltage.
- Regarding NCR18650G-H0ANA, the charging current should not exceed 3.35A/cell.
- The charging voltage should not exceed 4.20V/cell.
- The charging voltage is required to be set to less than 4.23V/cell with considering the accuracy of charger. Even if the charger is failed, the total safety shall be secured.
- The charger shall be equipped with a pre-charge system.
- If battery voltage goes down to less than 2.5V/cell, the battery should be charged by pre-charge current of maximum 0.33A. Once, the battery reached more than 2.5V/cell by the pre-charging, the charger can resume the standard charging method. However, if the battery voltage never recovers more than 2.5V/cell, the charger must be stopped and turned off.
- The charger shall be equipped a full charge detection.
- The charger shall detect the full-charged state by a timer, current detection or open circuit voltage detection. When the charger detects the full-charge, the charger shall stop charging. Do not apply the continuous charging (trickle charging) method.
- The charging temperature should be confined to the range 10°C to +45°C.

(2) Discharge

- The discharge current should not exceed 10A/cell.
- The discharge temperature should be between -20°C to +60°C.
- The discharge end voltage should be more than 2.5V/cell

(3) Over discharge

- Do not discharge the battery less than 2.0V/cell.

(4) Design of Pedelects and chargers.

- The cells should be kept away from heat generating electronic parts in order to avoid deterioration of battery performance.

File No	NCR18650-618	Rechargeable Battery Business Division, SANYO Electric Co., Ltd.
---------	--------------	---

Title	Lithium Ion Battery Specification (Cylindrical Type)	Page	10/13
-------	--	------	-------

10.2 Precautions for Battery Pack Design.

(1) Shape, mechanism and material of battery packs

- The battery pack should be designed so it cannot connect to unauthorized chargers.
- The battery pack should be designed so it cannot connect with unauthorized equipment and/or devices.
- The terminal shape should be designed to avoid short circuit issues. In addition, the battery pack should be equipped with an over current protection function in order to prevent from external short circuit issues.
- The terminal shape and structure should be designed so that it cannot connect in backwards.
- The battery pack should be designed to prevent static electricity, electrolyte, or water ingress issues.
- The battery pack should be designed so the protection circuit functions can be inspected during the assembly process.
- The battery pack should be designed so electrolyte cannot reach to the protection circuit board even if electrolyte leak out of the cells.
- The cells should be fixed by tape or glue in the case. If the battery pack is dropped, the cells should be protected against dents, deformations, and other mechanical stresses.
- Plastic cases should be closed with glue. If an ultra sonic welding method is applied to the case sealing, SANYO will not accept any responsibilities for any defects.
- The pack shall be designed so end users cannot remove or disassemble the cells.

(2) Protection circuit

The following protection circuit should be equipped in the battery pack:

● Overcharge protection

For safety reason and in order not to shorten the cycle life, max overcharge protection voltage of each block should be under 4.25V/cell including tolerance.

● Over discharge protection

If cell voltage reaches approximately 2.2V/cell, we recommend that the over discharge protection circuit shuts down the discharge current and the circuit consumption current is set to less than 1 μ A.

● Over current protection

If discharge current exceeds approximately 10A/cell, the over current protection will shut down the current.

(3) Electric circuit

- To avoid over discharge mode during long storage times, the consumption current of the battery pack's protection circuit should be set as low as possible.

(4) Cell connection

- The cells should not be connected using a soldering process. In order to avoid any damages, cells should be connected to lead plates by a spot welding method.

(5) Precautions on label

- The rating label should indicate required information and precautions.
- The precautions should be based on the information in section 2.

-------	--	------	-------

16 Battery Warranty Period

Unless otherwise stated in the contract, the warranty period is limited to one year from date of shipment. Panasonic will replace batteries if it is clear that there was a defect in Panasonic's manufacturing process and that the battery hasnot been misused.

17 Battery Safety Requirements

In order to ensure the safety of the battery, please contact SANYO to discuss design of the application from a mechanical and electrical perspective. Also, if there are special usage conditions (for example: a large current load, a quick charge method, or a special usage pattern), please consult SANYO before finalizing the product specification.
