Care For Your Transformer

ABOUT US

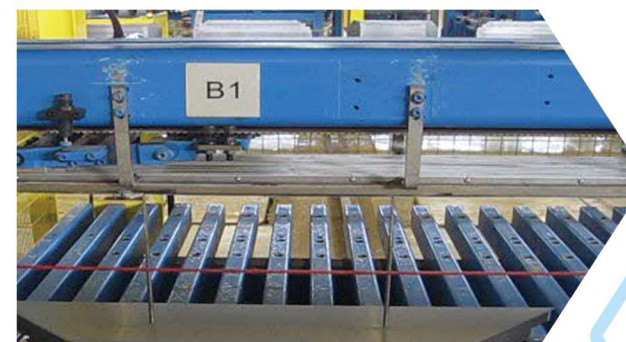

Euro-Asia is a leading machinery group and focusing on high end electric machinery ! Our mother company was established in 1955! In 1996 we started to make Busbar machinery as the first leading company in China! So far we have Busbar machine, Gasket Machine and transformer machine ! We have sold our machines to more than 60 countries, including ABB, Schneider and Siemens etc!

We are committed to the best solution for each customer , rather than we are Machine vendor!

Quality and Service are the core of our company! Keeping innovation is our strength! It's our lifelong obligation to service our customers under cooperation with our distributors in the world!

Your dream is our focus!

We Listen, We Learn and We Lead !

Core manufacturing

Cut To Lenth Line For
Transformer Lamination

Slitting line

Steel Strip Longitudinal
Shearing Line

Winding Machine

CNC Foil Winding Machine
Wire Winding Machine
Vertical Winding Machine

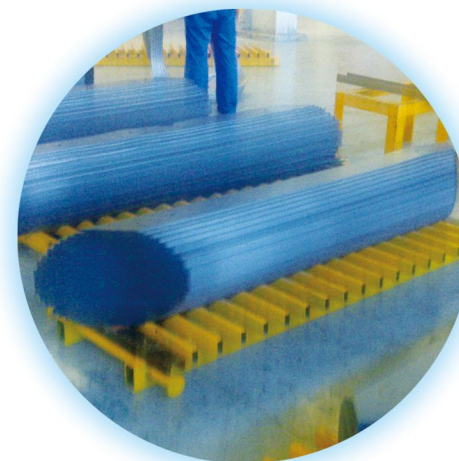

Stacking carriage

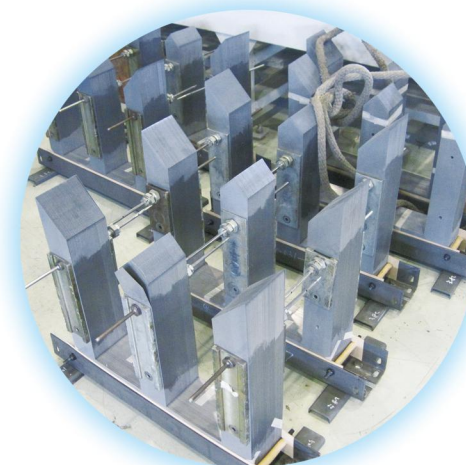

Punching unit

Shearing unit

Split yoke of a power transformer core

Distribution transformer cores cut in full sequential core cutting process and fully stacked on the end

Cut to length line for transformer lamination

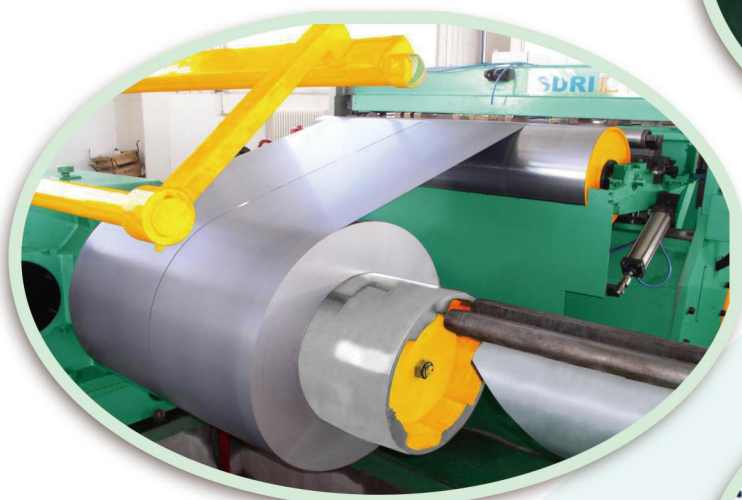

Decoil the raw material, feed with a fixed length via the servo motor, shearing it with various shearing tools into sheets of various types according to the drawing and then piling them on the stacking table via the conveying mechanism and the arranging mechanism.

Slitter

Guiding unit

Hydraulic recoil

Hydraulic decoiler
and loading trolley

Shearing unit

Steel strip longitudinal shearing line

This device is a special device to cut steel strip rolls into strips with a certain width. It is mainly used for decoiling cutting into strips and coiling of silicon steel sheets and thin steel plates and is applicable to processing and production of plate sheets for transformers, motors and transformers.

Automatic winding machine ZRXJ Series

The HV automatic winding machines are applicable to coil winding of medium/small distribution transformers, transducers, reactors and similar processes, especially winding of HV coils of amorphous alloy transformers.

HV automatic winding machine

Foil winding machine

Automatic welding mechanism and roll shearing mechanism adopt ball screws and linear guide rails for drive, ensuring the service life and accuracy of the device.

Automatic Winding and Layer Insulation Belt synchronously

Decoller

Foil coil

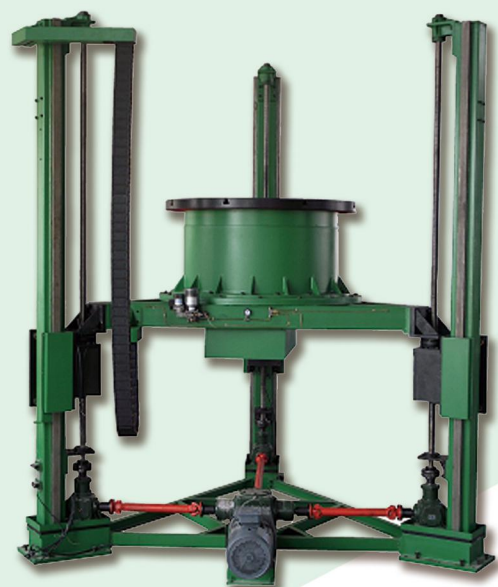

Welding device

End insulation overturn unit

Vertical Winding Machine

The machine is special equipment applied to manufacture high voltage and super high voltage helical windings and disc windings for transformers.

Wire Winding Machine ZRX Series

The Automatic wire winding machine ZRX series can complete winding of rectangular, circular and long circular coils. ZRX Series

Automatic Winding with
Layer Insulation Manually

Add: No. 145, Wenhua East Rd, Lixia District,
Jinan City, Shandong Province, China.
