**Accurate Containing Mark**

### Accurate Containing Mark

In Cell culture, every little thing matters. The containing mark accuracy is very important.

We have carefully repeated testing to ensure the containing mark of our Media Bottle is accurate and reliable.

The appearance of items are similar, and the quality is sometimes hiding in small details.

### Nice Sealing No Leakage

media bottles with unique and accurate spiral cap design avoids liquid leakage. It can withstand coke inversion test.

**Nice Sealing No Leakage**

Erlenmeyer flasks are used to contain liquids and for mixing, heating, cooling, incubation, filtration, storage, and other liquid-handling processes. Their slanted sides and narrow necks allow the contents to be mixed by swirling without the risk of spills, which is useful for titrations and for boiling liquids.

- Recommended volume :25-30% of the bottle volume;
- Rotation speed suggestion: the starting speed is 75-125RPM, you can control the rotation speed according to the situation;
- The liquid shake shaker should pay attention to the water level, the gas shake shaker should pay attention to the temperature

### Application:

**Storage of animal serum.** For example, fetal bovine serum, newborn bovine serum, horse serum, rat serum, etc.

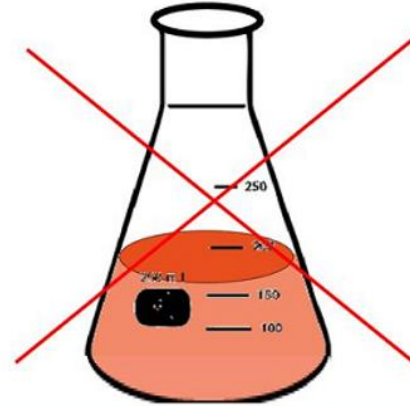

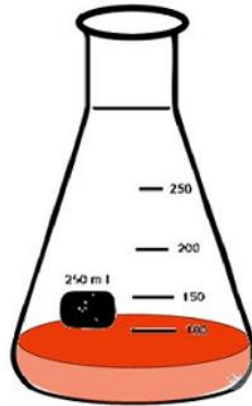

**Storage medium.** For example, DMEM / MEM/ F12/ trypsin, etc basal medium.

Storage other raw materials for diagnostic reagents.
