Track linear illumination

Features:

- 60 seconds quick installation without any tools
- Low installation cost - simply splicing to complete without the additional materials for installation
At the same time, the labor costs of wiring and fixture installation are significantly reduced.
- A three-phase circuit is preset in the track and the lamp can be individually controlled as required
- Dimming mode: 0-10V and DALI
- Emergency Mode: Emergency Battery/UPS System
- Sensor mode: microwave sensor and daylight sensor
- X, L, and T standard module node connectors
- Mounting options: Surface mounted chains or ropes
- Wide range of optics from 30° to 120° distribution, and double symmetrical distribution

Trunking Rail

- The track is the bracket to fix the lamp body
- The circuit preset in the track powers the lamp body
- Splicing between tracks to form a system
- The rails are pre-wired within the factory and are available in three standard sizes: 3, 5, and 7 wires. The 5th line is the basic power supply line, and the other line outside the 5th line is the function line, dimming and emergency functions.
- There are 3 fire wires in 5 wires, and a common zero line and ground wire; toggle the phase selection terminal in the track to connect the lamp body to different electrical circuits. Three FireWire external switches can easily realize the group management of different lamps in the system.
- A 2.5 square wire cable with a maximum current of 16A. One wire allows the installation of 50 60W lamps.
- The track length is available in three sizes: 600mm/1200mm/1500mm, which corresponds to a lamp body of the same length.

OSRAM DRIVER

Epistar LED / Sanan LED

LS6870D
Beam angle: 30° 60° 90°

LED Sharp (30°)
The sharp-angle lens can make the light highly concentrated, focusing on the item and highlighting the item so that the customer can clearly see the item at the first time. Can also focus on the precision workbench of the production line, so that the light is concentrated on the workbench, rather than other non-important places, this can help employees work more efficiently and accurately, but also help avoid unnecessary mistakes and reduce Damage to precision work.

LED Narrow (60°)
The 60-degree angle is specially designed for corridors, passages, and aisles. It provides the most suitable and uniform light without causing eye discomfort due to being too bright or too dark, especially for hospital patients.

LED wide angle (90°)
With a wide angle (90 degrees), multiple spaces, multiple areas can be easily illuminated, so that the entire The light distribution of the supermarkets is even, giving customers a good visual range and winning more popularity for the supermarket.

Track linear illumination

No need for bridges, no need to purchase additional materials, no wiring, provincial construction period, installation fees, labor costs, auxiliary materials costs, ceiling decoration costs, is a cluster lighting system.

Splicing terminal
The wiring is safe and fast, with detection holes, simple structure, easy to install and test.

Splice piece
The unique splicing way ensures the safety and stability of the use process

Wire
2.5mm² wire diameter pure copper wire, the maximum allowable current is 16A;

3wire trunk rail

—Seamless stitching, No need for bridges, no need to purchase additional materials, no wiring, provincial construction period, installation fees, labor costs, auxiliary materials costs, ceiling decoration costs.

5wire trunk rail

—There are three fire lines in the five-wire track, a common zero line and ground line, for the basic power supply line, toggle the lamp body internal devices, select any L1, L2, L3 lines, to achieve independent segmentation (on / off) control.

7wire trunk rail

—Two additional function lines based on the 5-wire function, with additional dimming / emergency / induction function, whichever one you prefer.
Dimming function (Dali / 1-10V)
Emergency Function (emergency battery / UPS system)
Induction Function (Microwave Sensor / Daylight Sensor)

8wire trunk rail

—Add 3 functions to the 3-wire function-dimmer / emergency / sensor.
Dimming function (Dali / 1-10V)
Emergency Function (emergency battery / UPS system)
Sensing Function (Microwave Sensor / Daylight Sensor)

Status 1

Status 1

The lamp are on during the working time

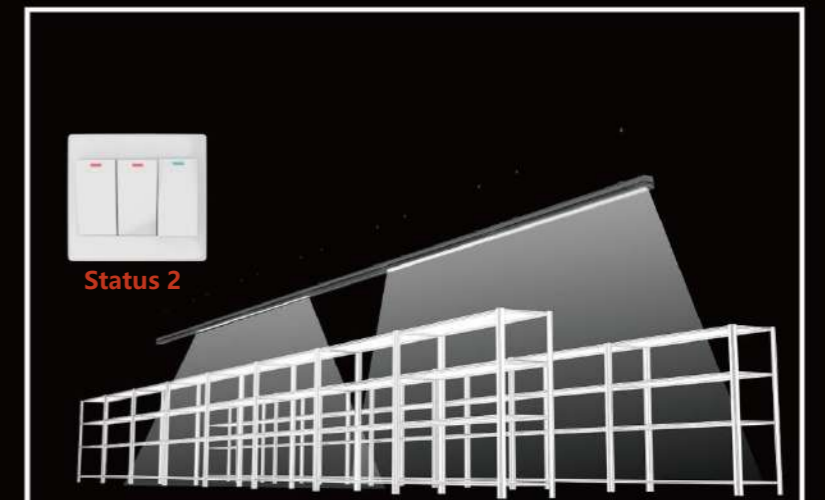

Status 3

Status 3

Keep one-thirds of the light at the break time

3-loop switch control

The three-loop function controls the lights individually by means of three switches, SW1, SW2, SW3 (on/off). These three switches Connected to L1, L2, L3.

Status 2

Status 2

Keep two-thirds of the light on during overtime

Status 4

Status 4

All the lamps are off after the duty

Lighting module
Power : 26W, 35W, 65W,
Dimming : 0-10V, DALI

Sensor Module(Daylight & Microwave)
1: The sensing module needs to be used with the dimming module.
Different from manual switch dimming, the use of induction module can realize automatic dimming of the system, high efficiency and energy saving, suitable for office, factory or warehouse.
2: The induction is divided into daylight induction and microwave induction.

Track Rail Module
1. The third party equipment is connected into the system as the electric connector of the track spot light, which can provide power and installation position, and reduce the overhead installation cost of the third party equipment;
2. Maintain the unity of the whole system-one, make the whole space effect neat and beautiful.

Socket Module
This module allows power to be supplied to third-party appliances from the track trunking.

Blind cover module
When the cascading track splicing does not follow the installation of the lamp body, the corresponding track line slot is closed by using a dummy lamp (blank cover) to prevent the cable from leaking out, so that the overall lighting system is neat and tidy.

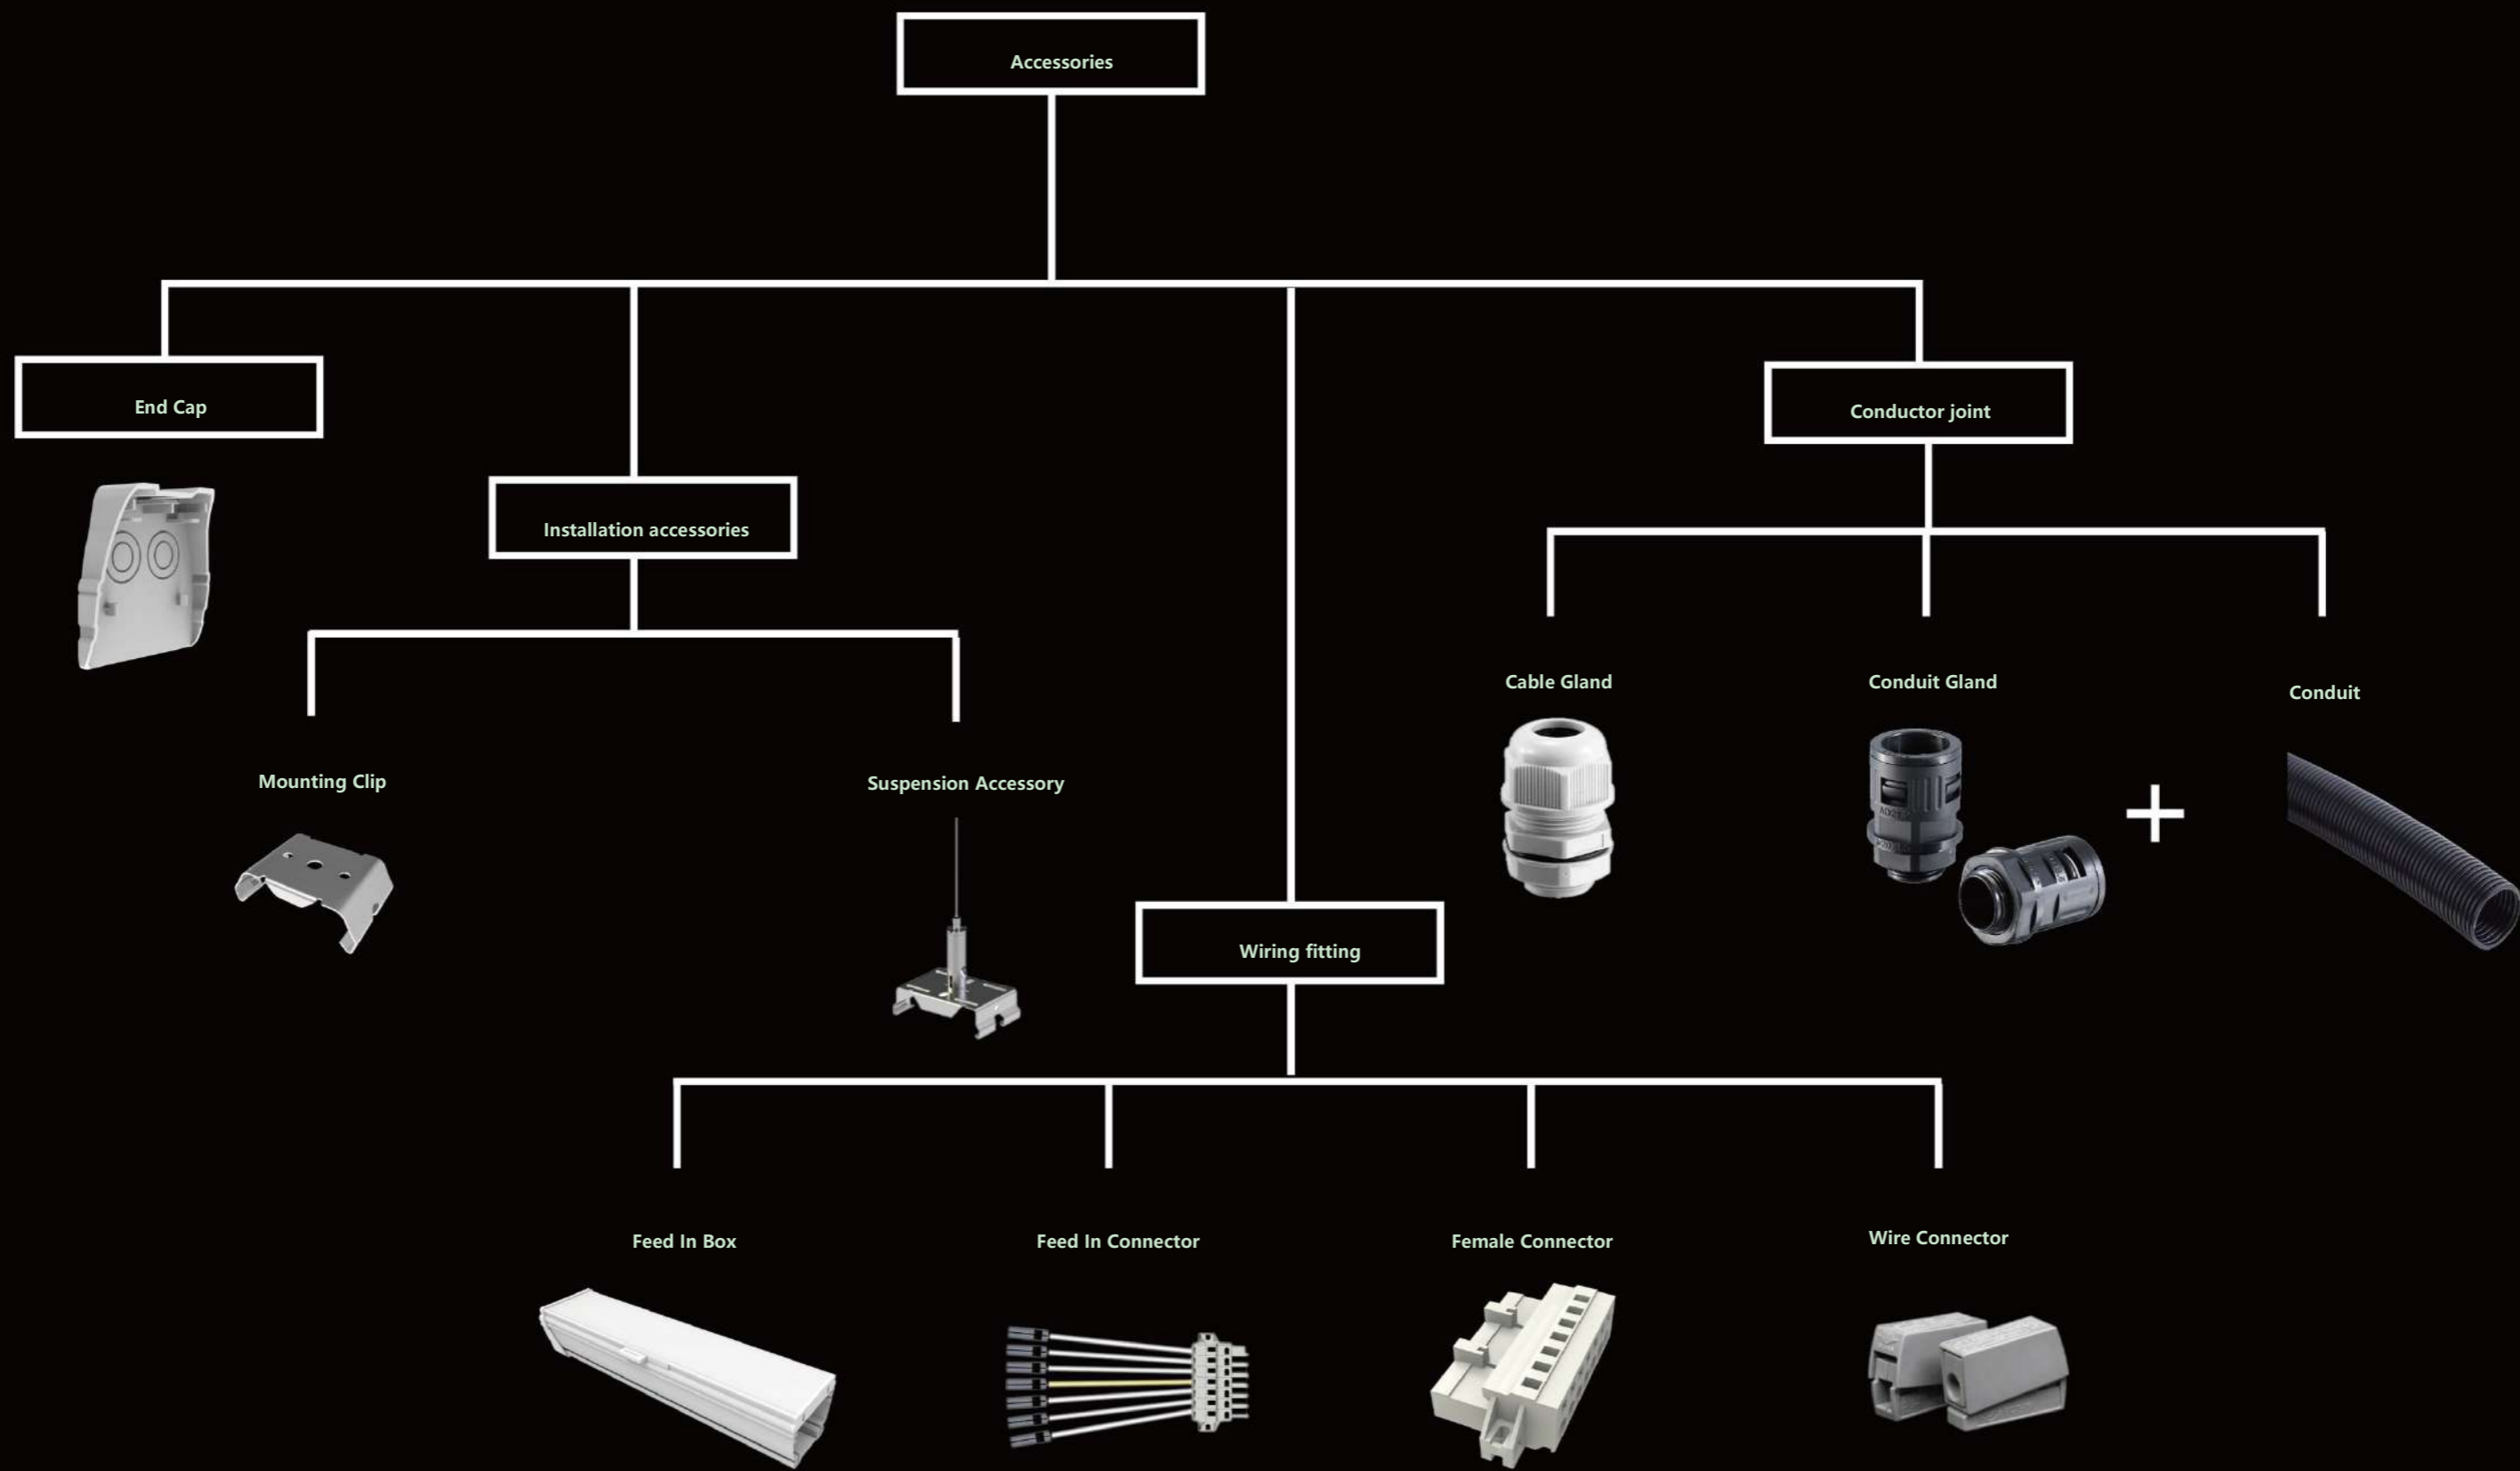

Escape Sign
Widely used in shopping malls, supermarkets, hotels, entertainment venues, stations, public buildings and other places for emergency evacuation of lighting instructions.

In the actual installation process, the node has three connection modes, and the connector is used to connect the entire lighting system. Compared with other traditional LED lights, this method will greatly solve various application problems in the installation.

Surface mouted installation

A1 : Hanging Installation Parts

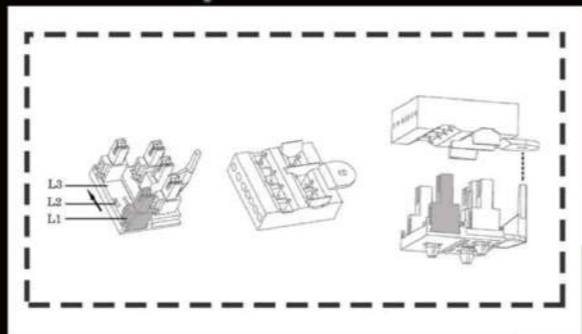

B1 : Splicing tracks, aligning the insertion sites, and then stitching.

C1 : Install the bellows and connect the corresponding line through the terminal.

D1: Remove the 8 screws on the splicing piece
D2: Remove the splicing piece, Fold the wire and the splicing terminal back into the track

E1 : Slide the plug, select L1, L2, L3 Wire, and then install the lamp body.

F1 : Push and fix the lamp body into the plug position of the cascade track.

G1 : Fix the end cap

I1: installation is complete
