

FISH COLLAGEN PEPTIDE

Product Profile

Fish collagen peptide is produced by using original enzyme technology, mainly originated from tilapia, cod fresh skin. The purity of collagen peptide produced is up to 97% and the molecular weight is within the range of 500-5000 Dalton, are widely used in health food, health care products, cosmetics and pharmaceutical products.

Basic Information

Specification: ≥ 90%

Standard: GB31645-2018

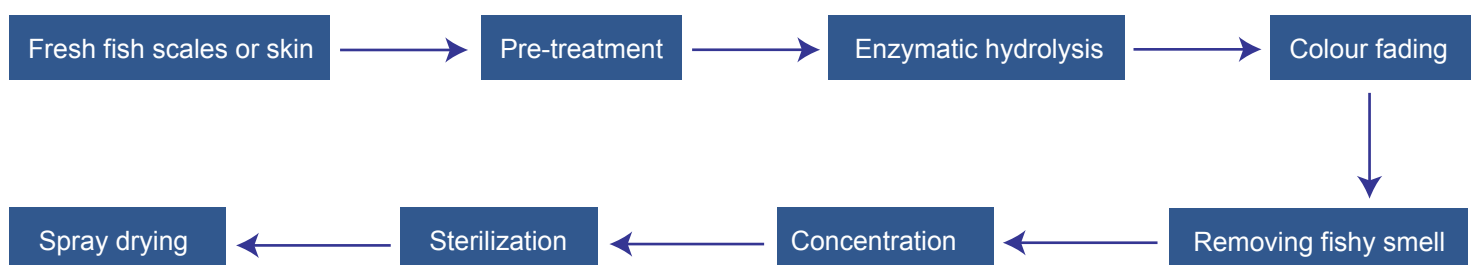

Product name: Fish collagen peptide

Appearance: White fluidity particles

Origin : Deep sea fish scale and skin

Manufacturing Technique

Fish collagen peptide is mainly originated from tilapia, cod fresh skin through bio-enzymatic directional shear technology.

Function

Skin

Fish collagen peptide can repair the acne scars on the epidermis, smooth fine lines; shrink pores, effectively lock moisture, keep skin moist and bright.

Eyes

Supplement of fish collagen peptide can tighten the skin structure, and eliminate dark circles and bags under the eyes.

Body Firming

Supplement of fish collagen peptide can etall and straight breast, slim body, reduce fat.

Bone

Fish collagen peptide can promote the formation of bone, improve bone strength, prevent osteoporosis, but also enhance the absorption of calcium.

Immunity

Fish collagen peptide can scavenge free radicals, have high antioxidant, high antibacterial activity, high anti-proliferation of cancer cells

Vessels

Fish collagen peptide can rapidly and effectively increase the elasticity of blood vessel wall and prevent arteriosclerosis and other diseases.

Application

Food Field: solid beverage, tablet, capsule, oral liquid and other food and functional foods.

Cosmetic Field: shampoo, make-up water, emulsion, face cream and other cosmetics.

Daily dosage recommended: 3-10g

Transportation: express delivery or logistics

Storage: stored under low temperature drying conditions

Packing: 25kg/carton for bulk goods, 1KG/ foil bag for sample

Shelf life: 2 years
