

KOJIC ACID DIPALMITATE

INTRODUCTION & DESCRIPTION

kojic acid dipalmitate powder is a kind of improved kojic acid derivatives. It overcomes the instability of kojic acid when it with light heat metal ions, while maintaining the tyrosinase activity and inhibition of kojic acid to prevent the role of melanin in the skin, besides, this inhibitory effect is more obvious than kojic acid which makes it become a new generation of efficient whitening agent. As a fat-soluble whitening agent, kojic acid dipalmitate powder can be more effectively absorbed by the skin, and in addition to being easy to make, it can also bring good moisturizing effect to the skin. The production process is as follows:

PRODUCT INFORMATION

Product name	Kojic acid dipalmitate
CAS No.	79725-98-7
Name	Kojic acid dipalmitate
Purity	≥98%
Product appearance	white crystalline powder

MECHANISM OF ACTION

1

Kojic acid dipalmitate can be applied into these fields. Such as skincare, sunscreen, whitening skin/freckle removal and kojic acid dipalmitate can cure pigmented skin diseases such as senile spots.

2

Kojic acid dipalmitate has a more effective skin lightening effect. Kojic acid dipalmitate significantly enhanced the inhibitory effect on tyrosinase activity, thus inhibiting the formation of melanin.

3

kojic acid dipalmitate is used in a variety of cosmetics, such as facial masks, creams, soaps, lotions and other cleansers. The Kojic acid dipalmitate is most commonly used on the face, hands and body.

PACKAGE

- The validity of kojic acid dipalmitate is 2 years.
- Packing: 1kg/ aluminum foil bag; 25 kg/cardboard drum

1kg
aluminum foil bag

25kg
drum
