

**Technical Introduction:**

1. This machine combines foreign advanced design with reasonable novel structure and high performance.
2. The air delivery system adopts special centrifugal fan for high air pressure freeze; the transmission system adopts frequency conversion drive.
3. The evaporator uses aluminum tube and sleeve to meet the export food hygiene standards.
4. The cabinet plate is made of a 120mm thick double-sided stainless steel sandwich polyurethane insulation plate.
5. The belt is made of stainless steel chain and stainless steel wire with center width of 1200mm.
6. The production capacity is 2T/H.(Take the sweet corn as example)
7. The total power is 59.4Kw.
8. Refrigerant: R22
