

TCMK5413W

Wireless Single I/O Module

- can be equipped with the TC5126W, TC5130M, TC5132M, and TC5142M model control panel
- battery model: CR17450; Battery capacity: 2400 mA; operating voltage: 3V
- operating current: alarm current 20 mA; monitoring current 13 uA
- theory standby: 20years (the actual service life is determined by the site environment and usage)
- Time of battery use in alarm state: 220hours
- communication mode: 470MHzFSK encoding bidirectional communication
- communication distance: <= 700m
- encoding mode: the controller is automatically assigned during the network
- temperature: 10 ~ + 55 ; humidity: 95%, non-condensation
- Input \ output module can connect to smoke exhaust valve, air supply valve, fire valve, etc., and can accept the action answer signal of the equipment
- input line and output line function
