### ■ 特殊交货状态 STEEL WITH SPECIAL FINISHES

#### PPC FINISH

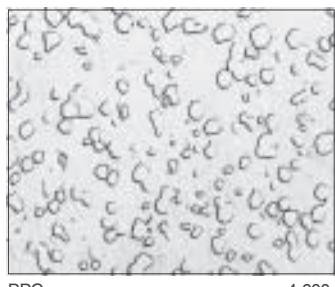

PPC steel is manufactured by finely distributing spheroidized carbides(approximately one-fifth of a carbide particle in diameter) on a special hotrolled strip and possesses the following strengths.

- The austenitization period is short, thereby allowing rapid hardening.
- During annealing, hardness of HV250 can be achieved. Through cold rolling and aging treatment, this can be raised to HV350, making it useful as heat-conserving material.

Standard	Type of Steel	Annealing	Production Range(Thickness)
JIS	SK95( SK4 )	HV250 ~ 310	0.3 ~ 6.0mm
	SK85( SK5 )		

Ordinary material      x4,600

PPC      x4,600

#### PT FINISH

PT steel is manufactured by applying a patenting treatment and then fixed cold rolling. Hardness of more than HV500 can be obtained through cold rolling and aging treatment.

This steel can be used in ordinary chains and springs and as a heat-conserving material.

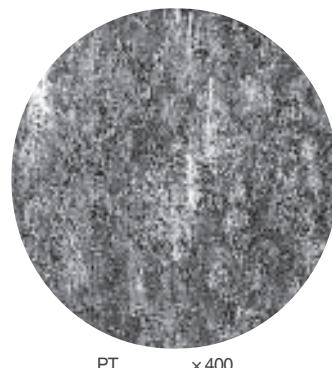

Standard	Type of Steel	Hardness
JIS	S75C	HV450 ~ 500
	S78C	HV500 ~ 550

#### Sorbite structure

Hardness: HRC40 ~ 55

Tensile strength: 1,200 ~ 1,800N/mm<sup>2</sup>

Elongation: 4% ~ 10%

PT      x400
