

# Technical Data Sheet (TDS)

## WT111

### Information

– **Product feature** This product is a transfer adhesive for the head of toilet roll paper. It has a very good balance of initial adhesion and "dry peeling" performance. The adhesive is slow to dry and has a long initial adhesion maintenance time. It has wide applicability to the production of toilet roll paper

– **Apply process** It can be used to directly open the barrel for mixing, and is suitable for roller scraping and other gluing systems; It has the characteristics of wide applicability of the substrate, fast operation speed, no dirt and easy cleaning.

– **Operation** Add water or raw rubber as needed. Due to different paper and machines, the proportion of customers is different. It is suggested that the ratio of mixing water is 1:2..

**Laws and regulations** All ingredients are in compliance with FDA Regulation 21 CFR 175.105 "Adhesive".

### Physical parameters

– **Appearance** White or turquoise translucent liquid

– **Sugar content** 4.0-10.0BX

– **Viscosity** 10000-40000cps ( 5#/10rpm/27°C )

**Packing** 50kg/barrel, 1000kg/barrel

**Storage condition** It is stored in a dry and cool place above 6 ° C, and the shortest effective period is half a year.

### Cautions

- Mixing with other products is prohibited;
- Cover tightly after application to avoid excessive evaporation and drying;
- Follow the first-in first-out principle when using.
