

DIF (AH) -L10/20/32单向阀

• 用途与特征 APPLICATION AND FEATURES

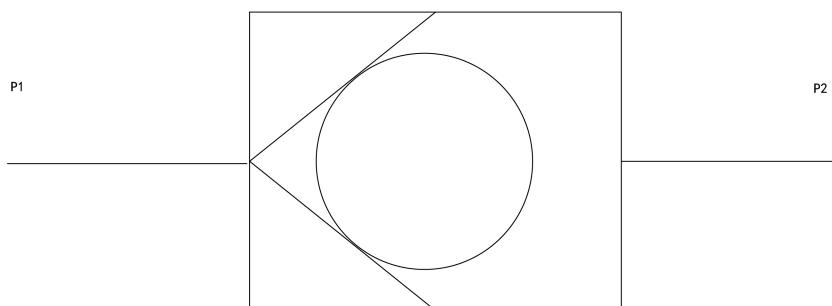

单向阀又称止回阀或逆止阀。用于液压系统中，以控制油流的沟通或切断。单向阀的开启压力有0.04MPa和0.4 MPa两种，以防止油液反向流动：前者一般用在压力管路中，后者一般可作为背压阀使用。

直通单向阀的进出油口在同一轴线方向，可采用螺纹管接头直接与系统管道相连接。

An overview of the check-valve is also known as a stop valve or an inverse valve. Used in hydraulic systems to control the communication or cutting off of oil flows. One-way valve opening pressure has 0.04 MPa and 0.4 MPa two to prevent the reverse flow of oil: the former is generally used in pressure piping, the latter can generally be used as a back pressure valve. The inlet and outlet of the straight-through valve is in the same axis direction, and the threaded fitting can be connected directly to the system pipe.
