

# Media Center Pro

## Overview:

Reach Media Center Pro provides uniform management and user access entry for Reach multimedia recording products, including all-in-one device Bee4, Bee5, Bee8, Bee8 Plus, Bee8 Pro, Bee9, Bee9 Plus and distribution solution REX Server and so on. With functions like device management, user management, video resources management and live streaming management, etc., it can offer complete end-to-end solutions that can meet various demands of customers from education, training center etc.

## Features:

### **View on mobile devices**

Adopts HTML5 technology, can be viewed both live and VOD from mobile device.

### **Management and allocation of device resources**

Manage REACH recording and streaming devices in a centralized manner. It supports the configuration, operation, and maintenance of the device and allocate device resources by classrooms. In addition, it supports the manual control of recording and the configuration of schedule recording.

### **User management**

Manage all kinds of users in the organization, including teachers, students, administrators, and IT personnel. This function assigns different system privileges to different users.

### **File management and release**

Manages files by categories>albums, and assigns different access rights to different user group. This function enables users to release files to the platform of the media center. In addition, the files are accessible from windows PC, MAC computer, and mobile devices.

### **Portal function**

Provide users with a portal page, allowing users to access their own resources through a unified interface.

### **Workflow management**

Supports scheduled recording, immediate recording or one button to start recording, and different file release modes (auto release or release after the verification of the Course Manager). The workflow is simple and adjustable as needed.

### **Customized mobile device interface**

Customized self-adapting mobile device access interface, it is more concise and easy for user to view live streaming and VOD files.
