
Manta A226A Silicone Resin Film-forming Agent

Description

A high molecular weight silicone resin mixture using isoparaffin as a diluent. The resin can form a durable polymer film on the skin or hair. It has good film-forming properties and waterproof properties, improving the durability of the product after use. High film-forming properties, long-lasting waterproofing, and smooth skin feel.

Typical Physical Properties

INCI/CTFA	Isododecane (and) Polymethylsilsesquioxane / Trimethylsiloxysilicate
-----------	---

Applications

Manta A226A has good film-forming and waterproof properties, which improves the durability of the product after use.

Packaging

In 20L, 200L drum.

Safety and Storage

Keep away from heat and light, stored in a dry place.
