Double shaft Shredder

Application Areas:

The shredder machine can easily pre-crush:

- plastic sheets;
- electronic waste;
- scrap (components,subassemblies;consumables);
- metals (lead,aluminum,copper,cable,barrels,sheet scrap,sheet metal pieces left over from production processes);
- aluminum cans;
- wood (wooden pallets or fruit boxes);
- plastic (plastic bottles or canisters);
- waste tire,rubber;
- waste household appliances;

- paper waste (cardboard,newspaper,office paper,books,magazine,kraft paper,paper core,cardboard tube,paper packaging material);

- textiles (rags,garments,carpet);

Technical Features:

- 1.Our shredders can be employed as either a primary or secondary shredder and can be seen working anywhere from the waste management company to biofuel producers;
- 2.Dual shafted, slow-speed, high-torque waste shredder with hardened steel cutters;
- 3.The two cutting rotors powerfully grab the feed material, and no matter the feed material is large piece of hard plastic or heavy tires, this machine can easily shred them into small pieces;
- 4.Double shaft shredder is able to process a number of different materials;shredder is designed with a powerful engine, long working length and aggressive input,Internal feeding volume bigger than traditional and common single shaft shredder machine and allow you using forklift truck to feed.
- 5.Heavy structure: the frame and structure of our shredders are made of high-thickness sheets and tubular. Blades are manufactured from high quality steel, suitable for shredding tough materials and for extra long life;
- 6.Depending on requirement, these discs (blades) are available in a wide range of quantities, qualities and shapes with the new double-shaft shredder;
- 7.Any overloads caused by foreign material are sensed by the PLC controller and cause the shaft rotation to stop and reverse direction to clear the foreign matter, and then resume;
- 8.Cutters removal and replacement can be carried out safely and simply.
- 9.Our shredders Use a planetary reducer, not a traditional gearbox, and the planetary gearbox has the following advantages:High Efficiency,Greater Stability,Compact Size,Higher Torque

Density, Cost Effective Precision, High Radial Loads.

Our service:

- Pre-sale: we give our client the detailed technician offer, sign the sales contract etc.
- In-sales: we supply the details layout, installation instruction, and technician support for the clients.
- After sales: we arrange engineer to install the machine and train the workers for our client.
- We have 24 hours service line to solve the after sales problem.
- We have free spare parts with the machine.
- We supply long term spare parts for every customer.
- We always update the new technology to every customer.
